Get for free

Follow the steps indicated. After installing the app, when it opens it gives an error. It says the app is not original and closes.

Keep the changes to a minimum , the more you change the more chance you have of getting errors. Just get the app to talk to the panel first then go from there. Sounds like its calling back via the api.

Hello you can change that by changing the 64 bit encryption head over to <https://www.google.com/amp/s/amp.base64encode.org/> and then type in the apps name what it is now and press encode it will give you a code then download mt manager and click classes within the app search within all classes and copy that code you can then go back onto 64bit type what name you want and replace the new code with old it fixes this issue I had this issue months ago

I configured all the URLs, but when logging in, even though everything is configured and apparently correct, it gives a login error.

I configured it, however, when logging in, it restarts the app and stays in a loop... it opens the intro video and comes back again.

Hi, I managed to install everything but the apk doesn't connect to the panel, after having inserted the DNS on the panel in the right place like this "  You need to be registered to see the hidden links , the app starts, I enter the user and pass and after I click on ok it goes around and around and doesn't stop. Can anyone help me?

Hi, I managed to install everything but the apk doesn't connect to the panel, after having inserted the DNS on the panel in the right place like this " [🔗 You need to be registered to see the hidden links](#) , the app starts, I enter the user and pass and after I click on ok it goes around and around and doesn't stop. Can anyone help me?

Hi yo don't need to put this http://dns; port/folder/api/

just put an url like this [🔗 You need to be registered to see the hidden links](#) : port/folder

Exactly just like that, it works! For sure
